Kennel Inspection

Remarks

***Actions which are directed to be taken are not all that may be required of the kennel operator to come into compliance.
The kennel operator is responsible for taking any and all actions necessary to come into compliance.***

The inspection of the kennel took place on August 13, 2019. There were 92 adult dogs and 0 puppies located on the premises at the time of this inspection. There were 52 adult dogs and 0 puppies listed in rescue kennel network homes at the time of this inspection. The 2019 kennel license was viewed along with the state forms exemption letter. The inspection was performed with State Veterinarian, Dr. Ward.

The inspection of August 13, 2019 is as follows:

207(b) / 21.29(c) - Housekeeping/Pests:

Warden observed the back corner area by the loading dock was cluttered with debris which included old food that was not in containers, used gloves, and other trash, this type of situation could encourage mammalian pests, as proven by rodent feces that were also viewed in this area during this inspection. Warden observed rodent feces on the floor along the building walls and underneath the primary enclosures housing dogs. Underneath several rows of primary enclosures that had already been cleaned for the day, there was an accumulation of food and other debris. This type of environment (accumulation of debris, rodent feces, food, and trash) will continue encouraging mammalian pest infestation regardless of the type of program in place to get rid of them. In the grooming room there was a leaking or broken pipe causing the entire floor under the sink to be flooded, there was also a pile of unknown debris under the sink. There was also an increased volume of rodent feces viewed under the shelves and behind the door in the grooming room. This kennel is currently operating significantly understaffed; these areas of concern will continue to go unaddressed, because staff must focus on cleaning and caring for the areas that the animals are immediately housed in.

This warden directs that the kennel operator take the following action(s):

The buildings and grounds of kennels shall be maintained, kept clean and in good repair to protect the animal from injury and to facilitate practices required by this chapter. Kennels shall have an effective program that controls ingress by insects, ectoparasites and avian and mammalian pests. Evidence of insects, ectoparasites and avian and mammalian pests or conditions that would allow or encourage infestation in a kennel are indicative of an ineffective program and unsanitary environmental sanitation in the kennel.

207(b) / 21.29(a) / 21.29(b) - Excreta/Sanitation:

Warden observed several dogs housed in multiple primary enclosures that were covered in excreta with no clean area for the dog(s) to sit, stand, or lie down.

This warden directs that the kennel operator take the following action(s):

Excreta shall be removed from the primary enclosure, including any floor area or ground surface beneath the primary enclosure, on a daily basis.

Primary enclosures for dogs shall be sanitized a minimum of once daily, and as often as is necessary to prevent an accumulation of debris or excreta or a disease hazard. A dog may not be placed in a primary enclosure previously occupied unless the enclosure has been sanitized.

**A follow-up inspection will take place at a later date and time.
